## No. 17 Measurement of Service

Charges for each call are computed on an airline mileage basis as described below.
A. Calls are measured and rounded to the higher full minute from the serving wire center of the Customer's originating location to the serving wire center of the destination of the call, regardless of Company routing. The minimum length of a call for billing purposes is sixty seconds.
B. The distance between the serving wire center origination point and that of the destination point is calculated by using the "V" and "H" coordinates as defined by Bell Communications Research (BellCore) and NECA Tariff FCC No. 4 in the following manner:

Step 1 Obtain the " V " and " H " coordinates for the originating and terminating wire centers.

Step 2 Obtain the difference between the "V" coordinates of each of the serving wire centers. Obtain the difference between the " H " coordinates.

Step 3 Square the differences obtained in Step 2.
Step 4 Add the squares of the "V" difference and "H" difference obtained in Step 3.
Step 5 Divide the sum of the squares obtained in Step 4 by ten (10). Round to the next higher whole number if any fraction results.

Step 6 Obtain the square root of the whole number obtained in Step 5. Round to the next higher whole number if any fraction is obtained. This is the airline mileage of the call.

## Formula:

$$
\sqrt{\frac{\left|V_{1}-V_{2}\right|^{2}+\left|H_{l}-H_{2}\right|^{2}}{10}}
